

## COURSE DESCRIPTION

Are you looking for some new ways to use the internet to instruct, reinforce, and enrich your current science curriculum? Then this is the course for you! In this course you will enhance lessons you currently teach as well as create new ones that engage students through online science games, videos, pictures, lessons, etc. There is a world of information out there at your fingertips! Collaboration will be a key issue in this course. Be prepared to share.

## OBJECTIVES

1. Students will evaluate their current science program/lessons and pinpoint at least 2 areas they would like to improve upon.
2. Students will create a rating guide for online resources and apply these ratings to activities they will use.
3. Students will work collaboratively by offering constructive criticism to at least one other student per assignment and by sharing resources discovered.
4. Students will become proficient in searching for online resources/enhancements to science lessons and apply them to lessons they currently teach.
5. Students will implement at least 1 lesson that they have enhanced and critique the usefulness of the online resources.
